01 MISSION BRIEFING

MISSION OBJECTIVE

Build maximal strength, work capacity, and structural durability under load — transferable output, not just gym numbers.

LONG MISSION STRATEGIC TARGET

By RTB (Week 13): exceed every Week 1 benchmark on load, reps, and conditioning pace, with movement quality holding under fatigue.

Four phases, thirteen weeks — the program map below. Volume and intensity are set to your chosen training frequency, not a template with days deleted. Every session: 5-minute mobility warm-up → main strength work → conditioning finisher.

DYH

WK 1–3

DESIGNATE YOUR HEADING

Baseline load, technique standard — lock in the movement before the weight goes up.

TEMPO 3-1-1-0 60–70% 1RM

GH

WK 4–7

GOLDEN HOUR

Progressive overload begins — volume climbs with load, phase to phase.

TEMPO 2-1-1-0 72–82% 1RM

HTL

WK 8–11

HOLD THE LINE

Peak intensity — volume trims as load peaks toward true max.

TEMPO 1-0-X-0 85–93% 1RM

RTB

WK 12–13

RTB

Deload, then retest every Week 1 number against where you stand now.

Read Safety Briefing and Disclaimer before Week 1, Day 1.

02 SAFETY BRIEFING

- 01 Always complete the 5-minute mobility warm-up before loading any weight — cold tissue under a heavy kettlebell, mace, or sandbag is how minor issues become real ones.
- 02 Technique before load. If form breaks down on a rep, drop the weight before you drop the standard — every exercise in this manual is linked to a form-check video for exactly this reason.
- 03 Soreness is normal. Sharp, sudden, or radiating pain is not — stop the movement immediately if it happens and don't push through it.
- 04 Progress load only when every prescribed rep at the current weight moves clean. Chasing a heavier number before technique is locked in is the single most common cause of injury in this kind of training.
- 05 Hydrate and fuel appropriately around training, especially if you're training in a hot climate.
- 06 Give at least one full day of rest between sessions that hit the same movement pattern hard — recovery is part of the program, not a break from it.
- 07 If you're new to structured training, returning after an injury, pregnant, or managing any health condition, get medical clearance before starting this or any exercise program.

04

5-MINUTE MOBILITY WARM-UP

Run this before every session in this manual, no exceptions. Six movements, roughly 45 seconds each — five minutes, full body, ready to load.

01

CAT-COW FLOW

45 sec

Slow, full range — mobilize the spine before anything else loads it

02

WORLD'S GREATEST STRETCH

45 sec / side

Hip flexor, hamstring, and thoracic rotation in one movement

03

ARM CIRCLES + SHOULDER CARS

45 sec

Small to large circles, then slow controlled articular rotations

04

HIP CARS

45 sec / side

Slow controlled hip circles — full range, no momentum

05

BODYWEIGHT SQUAT TO STAND

45 sec

Sit into a deep squat, stand tall, repeat — wake up the hips and ankles

06

INCHWORM WALKOUT

45 sec

Walk hands out to a plank, walk feet up to hands, stand — full-body primer
