RULES & REGULATIONS

The standard operating procedure governing every Extraction engagement — how the mission runs, who does what, and what's expected of both sides from MAYDAY to RTB.

DOCUMENT	APPLIES TO
SOP-001	EXTRACTION PROTOCOL · RECOVERY TEAM · DIRECT ACTION
GOVERNS	REVISION
MAYDAY → RTB, FULL CYCLE	V1.0 – SEP 2026

I. CHAIN OF COMMAND

1.1 COMMANDER (COACH)

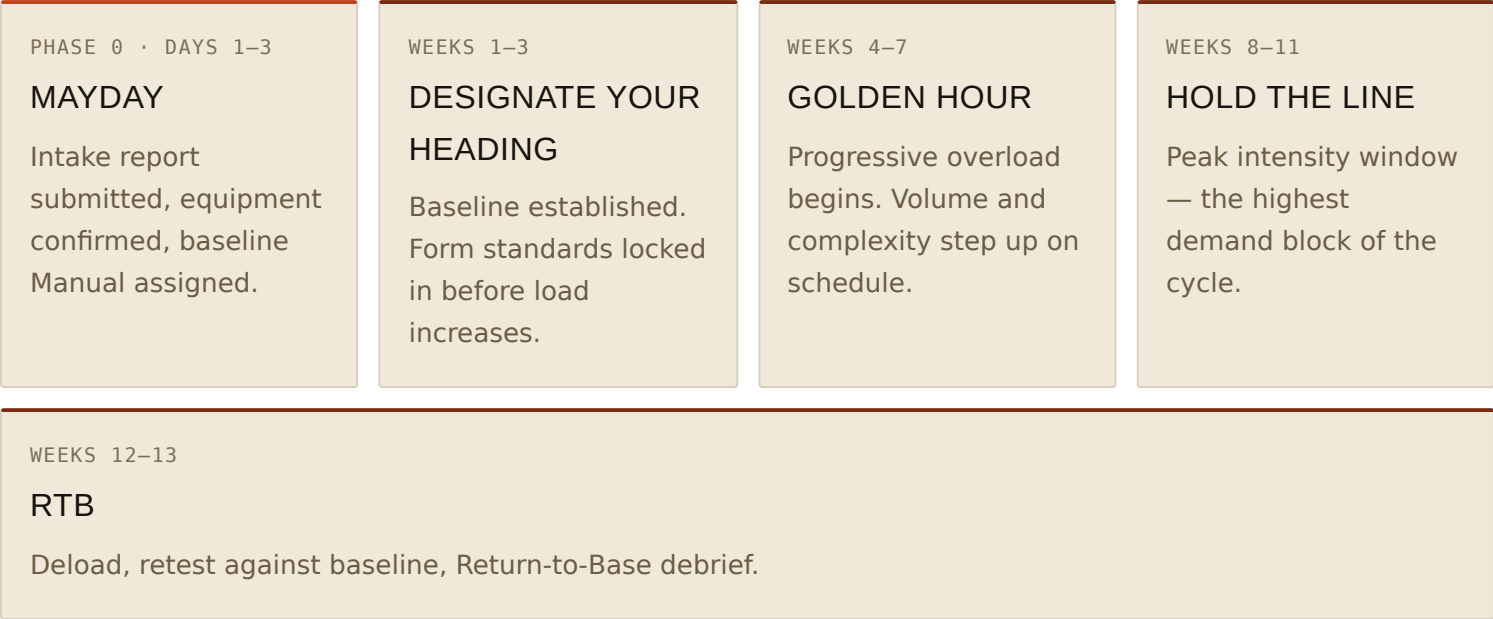

Reviews every **MAYDAY Report**, assigns the operator's **Manual**, approves phase advancement, and monitors incoming **SITREPs**. Final call on load, progression, and any deviation from the standard timeline.

1.2 OPERATOR (CLIENT)

Executes the assigned Manual as written, reports status on schedule, and flags equipment gaps, missed sessions, or pain — not normal fatigue — the moment they happen, not at the next check-in.

II. MISSION TIMELINE

Every engagement runs the same architecture regardless of tier. Phases are not optional and are not skipped — each one sets up the load the next phase depends on.

2.1 **SUSTAINED OPS**

After RTB, the operator either re-enters at **DESIGNATE YOUR HEADING** for a new cycle, steps up a tier, or moves to Sustained Ops maintenance cadence. Standing still is the one option off the table.

III. **COMMS PROTOCOL**

3.1 **OPS FREQ**

WhatsApp is the primary channel for both sides — intake questions, SITREPs, and anything time-sensitive. It is not for scheduling live calls in the self-guided **Extraction Protocol** tier.

3.2 **SITREP**

An **async** text-and-photo check-in on the cadence agreed at MAYDAY — not a scheduled call. Live check-ins are a Recovery Team / Direct Action feature and are booked separately from Ops Freq.

3.3 **RESPONSE WINDOW**

Expect a reply within one business day, not in real time. For anything urgent — pain, injury, an equipment failure mid-Manual — say so plainly in the message; it moves to the front of the queue.

IV. **CONDUCT & COMMITMENT**

4.1 **FULL TERM, NOT A TRIAL**

Commitment is to the full cycle, not an optional spend evaluated week to week. Results come from finishing MAYDAY through RTB, not from the first two good weeks.

4.2 **REPORT, DON'T GHOST**

A missed session gets reported on Ops Freq, ideally rescheduled inside the same week. A pattern of unreported misses is treated as a SITREP flag, not silently ignored.

4.3 **FORM OVER EGO**

No loading past clean form, especially through **GOLDEN HOUR** and **HOLD THE LINE** as weight climbs. Form-check video on request is not optional — it's how load increases stay safe.

4.4 **PAIN PAUSES, IT DOESN'T CANCEL**

Report pain — as distinct from normal training fatigue — the moment it shows up. Commander adjusts the Manual around it. Working through it silently is the one thing that actually ends a cycle early.

V. MANUALS & PROGRESSION

5.1 ASSIGNMENT

Every operator is assigned a **Manual** from the library after MAYDAY intake, matched to equipment access and current phase. Manuals are the deliverable — no operator trains without one on file.

5.2 PHASE ADVANCEMENT

Phase moves forward on the standard schedule (**DESIGNATE YOUR HEADING → GOLDEN HOUR → HOLD THE LINE → RTB**) unless SITREPs indicate otherwise. Commander can hold a phase; an operator cannot self-advance.

5.3 EDITS HAPPEN AT PHASE BOUNDARIES

Manual swaps and edits land between phases, not mid-week — the training stimulus stays consistent that way. Equipment loss or injury are the standing exceptions and get actioned immediately.

VI. RTB DEBRIEF

6.1 RETEST

Every RTB retests the same markers set at MAYDAY. The comparison — not a feeling — is what closes the cycle out.

6.2 FIELD LOG CLOSES

Progress data and photos from the cycle are compiled into the operator's Field Log at RTB, before the next decision gets made.

6.3 THE DECISION POINT

RTB ends with one of three calls: re-enter at **DESIGNATE YOUR HEADING** for a new cycle, step up a tier, or move to Sustained Ops. Commander recommends; the operator decides.

Acknowledged & Accepted

By continuing past MAYDAY intake, the operator confirms they've read this SOP and agree to run the mission by it — Commander included.
